

CARRIAGE FRAME FOR DYEING, PRINTING AND FINISHING PLANTS

The movable carriage frame is equipped to work with sewing machine class 39500 which produces a butted seam.

The machine adapter moves on a track and it is driven in both directions with a gear motor operated chain.

An infinitely adjustable switch allows the use of various widths of materials. The speed of the carriage is also infinitely adjustable, but has to be synchronized to the stitch length and machine speed.

The basic version of the carriage frame includes two adjustable needle clamps and one pneumatically operated clamp:

Order Sample:

90706NK2000G2-395

Order No. for frame	N = needle clamp K = clamp pneum.	Width of material	Mains-Voltage Frequency	Sewing Machine Adapter
90706	NK	2000 mm, in steps of 200 mm	G2 230/400 V 3phase 50 Hz	395
